# Engineering Mechanics DYNAMICS 

Meriam, Kraige \& Bolton 9TH EDITION

Chapter 2: Kinematics of Particles

- CONTENTS:
* Chapter 1: Introduction to Dynamics
* Chapter 2: Kinematics of Particles

Chapter 3: Kinetics of Particles
*hapter 4: Kinetics of Systems of Particles
*hapter 5: Plane Kinetics of Rigid Bodies

* Chapter 6: Plane Kinematics of Rigid Bodies

## CHAPTER 2

## Kinematics of Particles

## CHAPTER OUTLINE

2/1 Introduction
2/2 Rectilinear Motion
2/3 Plane Curvilinear Motion
2/4 Rectangular Coordinates ( $x-y$ )
2/5 Normal and Tangential Coordinates ( $n-t$ )
2/6 Polar Coordinates ( $r-\theta$ )
2/7 Space Curvilinear Motion
2/8 Relative Motion (Translating Axes)
2/9 Constrained Motion of Connected Particles

2/10 Chapter Review

Even if this car maintains a constant speed along the winding road, it accelerates laterally, and this acceleration must be considered in the design of the car, its tires, and the roadway itself.

## 2/1 Introduction

- Kinematics is the branch of dynamics which describes the motion of bodies without reference to the forces which either cause the motion or are generated as a result of the motion.
- Kinematics is often described as the "geometry of motion."
$\square$ A thorough working knowledge of kinematics is a prerequisite to kinetics, which is the study of the relationships between motion and the corresponding forces which cause or accompany the motion.

## 2/1 Introduction

## Particle Motion

* A particle is a body whose physical dimensions are so small compared with the radius of curvature of its path that we may treat the motion of the particle as that of a point.

## Choice of Coordinates

* Rectangular coordinates x, y, z (Cartesian)
- Cylindrical coordinates r, $\theta, \mathrm{z}$
* Spherical coordinates $\mathrm{R}, \theta, \phi$
* Tangent t and normal n to the curve (path variables)

دانشكده مهندسى مكانيك - درس ديناميك

## 2/2 Rectilinear Motion

$\square$ Particle P moving along a straight line

## Velocity and Acceleration

* Average velocity of the particle during the interval $\Delta t$ is the displacement divided by the time interval or $v_{\mathrm{av}}=\Delta s / \Delta t$

دانشكده مهندسى مكانيك - درس ديناميك

## 2/2 Rectilinear Motion

## Velocity and Acceleration

* instantaneous velocity

$$
v=\frac{d s}{d t}=\dot{s}
$$

* The average acceleration of the particle during the interval $\Delta t$ is the change in its velocity divided by the time interval or $a_{\mathrm{av}}=\Delta v / \Delta t$.
- instantaneous acceleration

$$
a=\frac{d v}{d t}=\dot{v}
$$

$$
\text { or } \quad a=\frac{d^{2} s}{d t^{2}}=\ddot{s}
$$

$$
v d v=a d s
$$

or

$$
\dot{s} d \dot{s}=\ddot{s} d s
$$

دانشكده مهنـدسى مكانيك - درس ديناميك

## 2/2 Rectilinear Motion

Graphical Interpretations

(b)

$\int_{s_{1}}^{s_{2}} d s=\int_{t_{1}}^{t_{2}} v d t \quad$ or

دانشكده مهنـدسى مكانيك - درس ديناميك

## 2/2 Rectilinear Motion

Graphical Interpretations

$$
\left.\int_{v_{1}}^{v_{2}} d v=\int_{t_{1}}^{t_{2}} a d t \quad \text { or } \quad v_{2}-v_{1}=\text { (area under } a-t \text { curve }\right)
$$

دانشكده مهندسى مكانيكى - درس ديناميك

## 2/2 Rectilinear Motion

## Graphical Interpretations

(b)

$$
\int_{v_{1}}^{v_{2}} v d v=\int_{s_{1}}^{s_{2}} a d s \quad \text { or } \quad \frac{1}{2}\left(v_{2}^{2}-v_{1}^{2}\right)=(\text { area under } a \text {-s curve) }
$$

دانشكده مهنـدسى مكانيك - درس ديناميك

## 2/2 Rectilinear Motion

## Analytical Integration

- (a) Constant Acceleration

$$
\begin{aligned}
& \int_{v_{0}}^{v} d v=a \int_{0}^{t} d t \quad \text { or } \quad v=v_{0}+a t \\
& \int_{v_{0}}^{v} v d v=a \int_{s_{0}}^{s} d s \quad \text { or } \quad v^{2}=v_{0}^{2}+2 a\left(s-s_{0}\right) \\
& \int_{s_{0}}^{s} d s=\int_{0}^{t}\left(v_{0}+a t\right) d t \quad \text { or } \quad s=s_{0}+v_{0} t+\frac{1}{2} a t^{2}
\end{aligned}
$$

دانشكده مهنـدسى مكانيك - درس ديناميك

## 2/2 Rectilinear Motion

## Analytical Integration

$\square$ (b) Acceleration Given as a Function of Time, $a=f(t)$

$$
\begin{aligned}
& \int_{v_{0}}^{v} d v=\int_{0}^{t} f(t) d t \quad \text { or } \quad v=v_{0}+\int_{0}^{t} f(t) d t \\
& \int_{s_{0}}^{s} d s=\int_{0}^{t} v d t \quad \text { or } \quad s=s_{0}+\int_{0}^{t} v d t
\end{aligned}
$$

دانشكده مهنـدسى مكانيك - درس ديناميك

## 2/2 Rectilinear Motion

## Analytical Integration

$\square$ (c) Acceleration Given as a Function of Velocity, $a=f(v)$

$$
\begin{aligned}
& t=\int_{0}^{t} d t=\int_{v_{0}}^{v} \frac{d v}{f(v)} \\
& \int_{v_{0}}^{v} \frac{v d v}{f(v)}=\int_{s_{0}}^{s} d s \quad \text { or } \quad s=s_{0}+\int_{v_{0}}^{v} \frac{v d v}{f(v)}
\end{aligned}
$$

دانشكده مهنـدسى مكانيك - درس ديناميك

## 2/2 Rectilinear Motion

## Analytical Integration

- (d) Acceleration Given as a Function of Displacement, $a=f(s)$

$$
\begin{aligned}
& \int_{v_{0}}^{v} v d v=\int_{s_{0}}^{s} f(s) d s \quad \text { or } \quad v^{2}=v_{0}^{2}+2 \int_{s_{0}}^{s} f(s) d s \\
& \int_{s_{0}}^{s} \frac{d s}{g(s)}=\int_{0}^{t} d t \quad \text { or } \quad t=\int_{s_{0}}^{s} \frac{d s}{g(s)}
\end{aligned}
$$

دانشكده مهنـدسى مكانيك - درس ديناميك

## SAMPLE PROBLEM 2/1

## SAMPLE PROBLEM 2/3

The spring-mounted slider moves in the horizontal guide with negligible friction and has a velocity $v_{0}$ in the $s$-direction as it crosses the mid-position where $s=0$ and $t=0$. The two springs together exert a retarding force to the motion of the slider, which gives it an acceleration proportional to the displacement but oppositely directed and equal to $a=-k^{2} s$, where $k$ is constant. (The constant is arbitrarily squared for later convenience in the form of the expressions.) Determine the expressions for the displacement $s$ and velocity $v$ as functions of the time $t$.

دانشكده مهنـدسى مكانيك - درس ديناميك

## SAMPLE PROBLEM 2/3

$$
\int v d v=\int-k^{2} s d s+C_{1} \text { a constant, } \quad \text { or } \quad \frac{v^{2}}{2}=-\frac{k^{2} s^{2}}{2}+C_{1}
$$

When $s=0, v=v_{0}$, so that $C_{1}=v_{0}^{2} / 2$

$$
\begin{gathered}
v=+\sqrt{ } v_{0}{ }^{2}-k^{2} s^{2} \\
\int \frac{d s}{\sqrt{v_{0}^{2}-k^{2} s^{2}}}=\int d t+C_{2} \text { a constant, or } \frac{1}{k} \sin ^{-1} \frac{k s}{v_{0}}=t+C_{2}
\end{gathered}
$$

$$
\begin{aligned}
& s=\frac{v_{0}}{k} \sin k t \\
& v=v_{0} \cos k t
\end{aligned}
$$

Solution II. Since $a=\ddot{s}$, the given relation may be written at once as

$$
\begin{aligned}
\ddot{s}+k^{2} s= & 0 \\
s=A \sin K t+B \cos K t \quad v & =A k \cos k t-B k \sin k t \\
s & =\frac{v_{0}}{k} \sin k t \quad \text { and } \quad v=v_{0} \cos k t
\end{aligned}
$$

دانشكده مهندسى مكانيك - درس ديناميك

## SAMPLE PROBLEM 2/4

A freighter is moving at a speed of 8 knots when its engines are suddenly stopped. (1) If it takes 10 minutes for the freighter to reduce its speed to 4 knots, determine and plot the distance $s$ in nautical miles moved by the ship and its speed $v$ in knots as functions of the time $t$ during this interval. The deceleration of the ship is proportional to the square of its speed, so that $a=-k v^{2}$.

$$
\begin{aligned}
& -k v^{2}=\frac{d v}{d t} \quad \frac{d v}{v^{2}}=-k d t \quad \int_{8}^{v} \frac{d v}{v^{2}}=-k \int_{0}^{t} d t \\
& -\frac{1}{v}+\frac{1}{8}=-k t \quad v=\frac{8}{1+8 k t} \\
& \frac{8}{1+6 t}=\frac{d s}{d t} \quad \int_{0}^{t} \frac{8 d t}{1+6 t}=\int_{0}^{s} d s \quad s=\frac{4}{3} \ln (1+6 t)
\end{aligned}
$$

دانشكده مهندسى مكانيكى - درس ديناميك

## 2/3 Plane Curvilinear Motion

- Position Vector $\mathbf{r}$

دانشكده مهنـدسى مكانيك - درس ديناميك

## 2/3 Plane Curvilinear Motion

## Velocity

$\square$ Average velocity of the particle between $A$ and $A^{\prime}$ is defined as $\mathbf{v}_{\mathrm{av}}=\Delta \mathbf{r} / \Delta t$

- instantaneous velocity (approaches tangent to the path)

$$
\mathbf{v}=\frac{d \mathbf{r}}{d t}=\dot{\mathbf{r}}
$$

- The magnitude of $\mathbf{v}$ is called the speed and is the scalar

$$
v=|\mathbf{v}|=\frac{d s}{d t}=\dot{s}
$$

دانشكده مهنـدسى مكانيك - درس ديناميك

## 2/3 Plane Curvilinear Motion <br> Acceleration

- The average acceleration of the particle between $A$ and $A^{\prime}$ is defined as $\Delta \mathbf{v} / \Delta t$
- instantaneous acceleration

$$
\mathbf{a}=\frac{d \mathbf{v}}{d t}=\dot{\mathbf{v}}
$$

دانشكده مهندسى مكانيكى - درس ديناميك

## 2/3 Plane Curvilinear Motion

Visualization of Motion

دانشعكه مهناسى مكانيك - درس ديناميك

2/4 Rectangular Coordinates ( $x-y$ )
Vector Representation

$$
\begin{array}{r}
\mathbf{r}=x \mathbf{i}+y \mathbf{j} \\
\mathbf{v}=\dot{\mathbf{r}}=\dot{x} \mathbf{i}+\ddot{y} \mathbf{j} \\
\mathbf{a}=\dot{\mathbf{v}}=\ddot{\mathbf{r}}=\dddot{x} \mathbf{i}+\ddot{y} \mathbf{j}
\end{array}
$$

$$
\begin{gathered}
v^{2}=v_{x}^{2}+v_{y}^{2} \quad v=\sqrt{v_{x}^{2}+v_{y}^{2}} \quad \tan \theta=\frac{v_{y}}{v_{x}} \\
a^{2}=a_{x}^{2}+a_{y}^{2} \quad a=\sqrt{a_{x}^{2}+a_{y}^{2}}
\end{gathered}
$$

دانشكده مهندسى مكانيك - درس ديناميك

## 2/4 Rectangular Coordinates ( $x-y$ )

## Projectile Motion

$\square$ An important application of two-dimensional kinematic theory is the problem of projectile motion.

- For a first treatment of the subject, we neglect aerodynamic drag and the curvature and rotation of the earth, and we assume that the altitude change is small enough so that the acceleration due to gravity can be considered constant.

$$
a_{x}=0 \quad a_{y}=-g
$$

دانشكده مهنـدسى مكانيك - درس ديناميك

## 2/4 Rectangular Coordinates ( $x-y$ )

## Projectile Motion

$$
\begin{array}{cl}
v_{x}=\left(v_{x}\right)_{0} & v_{y}=\left(v_{y}\right)_{0}-g t \\
x=x_{0}+\left(v_{x}\right)_{0} t & y=y_{0}+\left(v_{y}\right)_{0} t-\frac{1}{2} g t^{2} \\
v_{y}^{2}=\left(v_{y}\right)_{0}^{2}-2 g\left(y-y_{0}\right)
\end{array}
$$

دانشكده مهندسى مكانيكى - درس ديناميك

## 2/4 Rectangular Coordinates ( $x-y$ )

## Projectile Motion

This stroboscopic photograph of a bouncing ping-pong ball suggests not only the parabolic nature of the path, but also the fact that the speed is lower near the apex.
دانشكده مهندسى مكانيك - درس ديناميك

## SAMPLE PROBLEM 2/5

The curvilinear motion of a particle is defined by $v_{x}=50-16 t$ and $y=100-4 t^{2}$, where $v_{x}$ is in meters per second, $y$ is in meters, and $t$ is in seconds. It is also known that $x=0$ when $t=0$. Plot the path of the particle and determine its velocity and acceleration when the position $y=0$ is reached.

$$
\begin{array}{lll}
{\left[\int d x=\int v_{x} d t\right]} & \int_{0}^{x} d x=\int_{0}^{t}(50-16 t) d t & x=50 t-8 t^{2} \mathrm{~m} \\
{\left[a_{x}=\dot{v}_{x}\right]} & a_{x}=\frac{d}{d t}(50-16 t) & a_{x}=-16 \mathrm{~m} / \mathrm{s}^{2} \\
{\left[a_{y}=\dot{v}_{y}\right]} & a_{y}=\frac{d}{d t}(-8 t) & a_{y}=-8 \mathrm{~m} / \mathrm{s}^{2} \\
{\left[v_{y}=\dot{y}\right]} & v_{y}=\frac{d}{d t}\left(100-4 t^{2}\right) & v_{y}=-8 t \mathrm{~m} / \mathrm{s}
\end{array}
$$

دانشكده مهنـدسى مكانيك - درس ديناميك

## SAMPLE PROBLEM 2/5

$$
\begin{aligned}
v_{x} & =50-16(5)=-30 \mathrm{~m} / \mathrm{s} \\
v_{y} & =-8(5)=-40 \mathrm{~m} / \mathrm{s} \\
v & =\sqrt{(-30)^{2}+(-40)^{2}}=50 \mathrm{~m} / \mathrm{s} \\
a & =\sqrt{(-16)^{2}+(-8)^{2}}=17.89 \mathrm{~m} / \mathrm{s}^{2} \\
& \mathbf{v}=-30 \mathbf{i}-40 \mathbf{j ~ m} / \mathrm{s} \\
\mathbf{a}=-16 \mathbf{i}-8 \mathbf{j ~ m} / \mathrm{s}^{2} & v_{x}=-30 \mathrm{~m} / \mathrm{s}
\end{aligned}
$$

دانشكده مهندسى مكانيك - درس ديناميك

## SAMPLE PROBLEM 2/6

A team of engineering students designs a medium-size catapult which launches $8-\mathrm{lb}$ steel spheres. The launch speed is $v_{0}=80 \mathrm{ft} / \mathrm{sec}$, the launch angle is $\theta=35^{\circ}$ above the horizontal, and the launch position is 6 ft above ground level. The students use an athletic field with an adjoining slope topped by an 8 - ft fence as shown. Determine:
(a) the time duration $t_{f}$ of the flight
(b) the $x-y$ coordinates of the point of first impact
(c) the maximum height $h$ above the horizontal field attained by the ball
(d) the velocity (expressed as a vector) with which the projectile strikes the ground (or the fence)

Repeat part (b) for a launch speed of $v_{0}=75 \mathrm{ft} / \mathrm{sec}$.

دانشكده مهنـدسى مكانيك - درس ديناميكى

## SAMPLE PROBLEM 2/6

$$
\begin{aligned}
& {\left[x=x_{0}+\left(v_{x}\right)_{0} t\right] \quad 100+30=0+\left(80 \cos 35^{\circ}\right) t \quad t=1.984 \mathrm{sec}} \\
& {\left[y=y_{0}+\left(v_{y}\right)_{0} t-\frac{1}{2} g t^{2}\right] \quad y=6+80 \sin 35^{\circ}(1.984)-\frac{1}{2}(32.2)(1.984)^{2}=33.7 \mathrm{ft}} \\
& {\left[y=y_{0}+\left(v_{y}\right)_{0} t-\frac{1}{2} g t^{2}\right] \quad 20=6+80 \sin 35^{\circ}\left(t_{f}\right)-\frac{1}{2}(32.2) t_{f}^{2} \quad t_{f}=2.50 \sec \text { Ans. }} \\
& {\left[x=x_{0}+\left(v_{x}\right)_{0} t\right] \quad x=0+80 \cos 35^{\circ}(2.50)=164.0 \mathrm{ft}}
\end{aligned}
$$

(b) Thus the point of first impact is $(x, y)=(164.0,20) \mathrm{ft}$.

## SAMPLE PROBLEM 2/6

(c) For the maximum height:
$\left[v_{y}{ }^{2}=\left(v_{y}\right)_{0}{ }^{2}-2 g\left(y-y_{0}\right)\right] \quad 0^{2}=\left(80 \sin 35^{\circ}\right)^{2}-2(32.2)(h-6) \quad h=38.7 \mathrm{ft} \quad$ Ans.
(d) For the impact velocity:

$$
\begin{array}{ll}
{\left[v_{x}=\left(v_{x}\right)_{0}\right]} & v_{x}=80 \cos 35^{\circ}=65.5 \mathrm{ft} / \mathrm{sec} \\
{\left[v_{y}=\left(v_{y}\right)_{0}-g t\right]} & v_{y}=80 \sin 35^{\circ}-32.2(2.50)=-34.7 \mathrm{ft} / \mathrm{sec}
\end{array}
$$

So the impact velocity is $\mathbf{v}=65.5 \mathbf{i}-34.7 \mathbf{j} \mathrm{ft} / \mathrm{sec}$.
Ans.

دانشكده مهنـدسى مكانيك - درس ديناميك

## $2 / 5$ Normal and Tangential Coordinates ( $n-t$ )

$\square$ Measurements made along the tangent $t$ and normal $n$ to the path of the particle

دانشكده مهندسى مكانيك - درس ديناميك

## 2/5 Normal and Tangential Coordinates ( $n-t$ )

Velocity and Acceleration

$$
\mathbf{v}=v \mathbf{e}_{t}=\rho \dot{\mathbf{\beta}} \mathbf{e}_{t}
$$

دانشكده مهنـدسى مكانيك - درس ديناميك

## 2/5 Normal and Tangential Coordinates ( $n-t$ )

Velocity and Acceleration

$$
\begin{gathered}
\mathbf{a}=\frac{d \mathbf{v}}{d t}=\frac{d\left(v \mathbf{e}_{t}\right)}{d t}=v \dot{\mathbf{e}}_{t}+\dot{v} \mathbf{e}_{t} \\
d \mathbf{e}_{t}=\mathbf{e}_{n} d \beta \\
\dot{\mathbf{e}}_{t}=\dot{\beta} \mathbf{e}_{n}
\end{gathered}
$$

دانشكده مهنـدسى مكانيك - درس ديناميك

## 2/5 Normal and Tangential Coordinates ( $n-t$ )

Velocity and Acceleration

$$
\begin{aligned}
& \mathbf{a}=\frac{v^{2}}{\rho} \mathbf{e}_{n}+\dot{v} \mathbf{e}_{t} \\
& a_{n}=\frac{v^{2}}{\rho}=\rho \dot{\beta}^{2}=v \dot{\boldsymbol{\beta}} \\
& a_{t}=\dot{v}=\ddot{s} \rightarrow a_{t}=\dot{v}=d(\rho \dot{\beta}) / d t=\rho \ddot{\beta}+\dot{\rho} \dot{\boldsymbol{\beta}} \\
& a=\sqrt{a_{n}{ }^{2}+a_{t}{ }^{2}}
\end{aligned}
$$

دانشكده مهنـدسى مكانيك - درس ديناميك

## 2/5 Normal and Tangential Coordinates ( $n-t$ )

Geometric Interpretation
$a_{n}$ is always directed toward the center of curvature $C$

## $2 / 5$ Normal and Tangential Coordinates ( $n-t$ )

## Circular Motion

\% Circular motion is an important special case of plane curvilinear motion where the radius of curvature $\rho$ becomes the constant radius $r$ of the circle.

$$
\begin{aligned}
v & =r \dot{\theta} \\
a_{n} & =v^{2} / r=r \dot{\theta}^{2}=v \dot{\theta} \\
a_{t} & =\dot{v}=r \ddot{\theta}
\end{aligned}
$$

دانشعكه مهناسى مكانيع - درس ديناميK

## SAMPLE PROBLEM 2/7

To anticipate the dip and hump in the road, the driver of a car applies her brakes to produce a uniform deceleration. Her speed is $100 \mathrm{~km} / \mathrm{h}$ at the bottom $A$ of the dip and $50 \mathrm{~km} / \mathrm{h}$ at the top $C$ of the hump, which is 120 m along the road from $A$. If the passengers experience a total acceleration of $3 \mathrm{~m} / \mathrm{s}^{2}$ at $A$ and if the radius of curvature of the hump at $C$ is 150 m , calculate $(a)$ the radius of curvature $\rho$ at $A$, (b) the acceleration at the inflection point $B$, and (c) the total acceleration at $C$.

$$
\begin{aligned}
& v_{A}=\left(100 \frac{\mathrm{~km}}{\mathrm{~h}}\right)\left(\frac{1 \mathrm{~h}}{3600 \mathrm{~s}}\right)\left(1000 \frac{\mathrm{~m}}{\mathrm{~km}}\right)=27.8 \mathrm{~m} / \mathrm{s} \\
& v_{C}=50 \frac{1000}{3600}=13.89 \mathrm{~m} / \mathrm{s}
\end{aligned}
$$

$$
\begin{aligned}
& {\left[\int v d v=\int a_{t} d s\right] \quad \int_{v_{A}}^{v_{C}} v d v=a_{t} \int_{0}^{s} d s} \\
& \quad a_{t}=\frac{1}{2 s}\left(v_{C}^{2}-v_{A}^{2}\right)=\frac{(13.89)^{2}-(27.8)^{2}}{2(120)}=-2.41 \mathrm{~m} / \mathrm{s}^{2}
\end{aligned}
$$

دانشكده مهنـدسى مكانيكى - درس ديناميك

## SAMPLE PROBLEM 2/7

$$
\begin{array}{ll}
{\left[a^{2}=a_{n}{ }^{2}+a_{t}^{2}\right]} & a_{n}{ }^{2}=3^{2}-(2.41)^{2}=3.19 \quad a_{n}=1.785 \mathrm{~m} / \mathrm{s}^{2} \\
{\left[a_{n}=v^{2} / \rho\right]} & \rho=v^{2} / a_{n}=(27.8)^{2} / 1.785=432 \mathrm{~m}

## SAMPLE PROBLEM 2/8

A certain rocket maintains a horizontal attitude of its axis during the powered phase of its flight at high altitude. The thrust imparts a horizontal component of acceleration of $20 \mathrm{ft} / \mathrm{sec}^{2}$, and the downward acceleration component is the acceleration due to gravity at that altitude, which is $g=30 \mathrm{ft} / \mathrm{sec}^{2}$. At the instant represented, the velocity of the mass center $G$ of the rocket along the $15^{\circ}$ direction of its trajectory is $12,000 \mathrm{mi} / \mathrm{hr}$. For this position determine (a) the radius of curvature of the flight trajectory, (b) the rate at which the speed $v$ is increasing, (c) the angular rate $\dot{\beta}$ of the radial line from $G$ to the center of curvature $C$, and ( $d$ ) the vector expression for the total acceleration a of the rocket.

دانشكده مهندسى مكانيك - درس ديناميك

## SAMPLE PROBLEM 2/8

$a_{n}=30 \cos 15^{\circ}-20 \sin 15^{\circ}=23.8 \mathrm{ft} / \mathrm{sec}^{2}$
$a_{t}=30 \sin 15^{\circ}+20 \cos 15^{\circ}=27.1 \mathrm{ft} / \mathrm{sec}^{2}$
$\begin{array}{ll}{\left[a_{n}=v^{2} / \rho\right]} & \rho=\frac{v^{2}}{a_{n}}=\frac{[(12,000)(44 / 30)]^{2}}{23.8}=13.01\left(10^{6}\right) \mathrm{ft} \\ {\left[\dot{v}=a_{t}\right]} & \dot{v}=27.1 \mathrm{ft} / \mathrm{sec}^{2}\end{array}$
 $\downarrow g=30 \mathrm{ft} / \mathrm{sec}^{2}$

$$
[v=\rho \dot{\beta}] \quad \dot{\beta}=v / \rho=\frac{12,000(44 / 30)}{13.01\left(10^{6}\right)}=13.53\left(10^{-4}\right) \mathrm{rad} / \mathrm{sec}
$$

$$
\mathbf{a}=23.8 \mathbf{e}_{n}+27.1 \mathbf{e}_{t} \mathrm{ft} / \mathrm{sec}^{2}
$$

## SAMPLE PROBLEM 2/10

A tracking radar lies in the vertical plane of the path of a rocket which is coasting in unpowered flight above the atmosphere. For the instant when $\theta=30^{\circ}$, the tracking data give $r=25\left(10^{4}\right) \mathrm{ft}, \dot{r}=4000 \mathrm{ft} / \mathrm{sec}$, and $\dot{\theta}=0.80 \mathrm{deg} / \mathrm{sec}$. The acceleration of the rocket is due only to gravitational attraction and for its particular altitude is $31.4 \mathrm{ft} / \mathrm{sec}^{2}$ vertically down. For these conditions determine the velocity $v$ of the rocket and the values of $\ddot{r}$ and $\ddot{\theta}$.

## SAMPLE PROBLEM 2/10

$$
\begin{array}{ll}
{\left[v_{r}=\dot{r}\right]} & v_{r}=4000 \mathrm{ft} / \mathrm{sec} \\
{\left[v_{\theta}=r \dot{\theta}\right]} & v_{\theta}=25\left(10^{4}\right)(0.80)\left(\frac{\pi}{180}\right)=3490 \mathrm{ft} / \mathrm{sec} \\
{\left[v=\sqrt{v_{r}^{2}+v_{\theta}^{2}}\right]} & v=\sqrt{(4000)^{2}+(3490)^{2}}=5310 \mathrm{ft} / \mathrm{sec}
\end{array}
$$

$$

دانشكده مهندسى مكانيك - درس ديناميى

## SAMPLE PROBLEM 2/11

The power screw starts from rest and is given a rotational speed $\dot{\theta}$ which increases uniformly with time $t$ according to $\dot{\theta}=k t$, where $k$ is a constant. Determine the expressions for the velocity $v$ and acceleration $a$ of the center of ball $A$ when the screw has turned through one complete revolution from rest. The lead of the screw (advancement per revolution) is $L$.

$$
\begin{array}{ll}
\theta=\Delta \theta=\int \dot{\theta} d t=\frac{1}{2} k t^{2} \quad 2 \pi=\frac{1}{2} k t^{2} & t=2 \sqrt{\pi / k} \\
\dot{\theta}=k t=k(2 \sqrt{\pi / k})=2 \sqrt{\pi k}
\end{array}
$$

The helix angle $\gamma$ of the path followed by the center of the ball governs the relation between the $\theta$ - and $z$-components of velocity and is given by $\tan \gamma=$ $L /(2 \pi b)$. Now from the figure we see that $v_{\theta}=v \cos \gamma$. Substituting $v_{\theta}=r \dot{\theta}=b \dot{\theta}$ from Eq. 2/16 gives $v=v_{\theta} / \cos \gamma=b \dot{\theta} / \cos \gamma$. With $\cos \gamma$ obtained from $\tan \gamma$ and with $\dot{\theta}=2 \sqrt{\pi k}$, we have for the one-revolution position

## SAMPLE PROBLEM 2/11

$$
\begin{aligned}
\tan \gamma & =L /(2 \pi b) \\
v_{\theta} & =v \cos \gamma \quad v_{\theta}=r \dot{\theta}=b \dot{\theta} \quad v=v_{\theta} / \cos \gamma=b \dot{\theta} / \cos \gamma
\end{aligned}
$$

that for $\tan \beta=a / b$ the cosine of $\beta$

$$
v=2 b \sqrt{\pi k} \frac{\sqrt{L^{2}+4 \pi^{2} b^{2}}}{2 \pi b}=\sqrt{\frac{k}{\pi}} \sqrt{L^{2}+4 \pi^{2} b^{2}}
$$

$$
\begin{array}{ll}
{\left[a_{r}=\ddot{r}-r \dot{\theta}^{2}\right]} & a_{r}=0-b(2 \sqrt{\pi k})^{2}=-4 b \pi k \\
{\left[a_{\theta}=r \ddot{\theta}+2 \dot{r} \dot{\theta}\right]} & a_{\theta}=b k+2(0)(2 \sqrt{\pi k})=b k \\
{\left[a_{z}=\ddot{z}=\dot{v}_{z}\right]} & a_{z}=\frac{d}{d t}\left(v_{z}\right)=\frac{d}{d t}\left(v_{\theta} \tan \gamma\right)=\frac{d}{d t}(b \dot{\theta} \tan \gamma)
\end{array}
$$

$$
=(b \tan \gamma) \ddot{\theta}=b \frac{L}{2 \pi b} k=\frac{k L}{2 \pi}
$$

$$
\begin{aligned}
a & =\sqrt{(-4 b \pi k)^{2}+(b k)^{2}+\left(\frac{k L}{2 \pi}\right)^{2}} \\
& =b k \sqrt{\left(1+16 \pi^{2}\right)+L^{2} /\left(4 \pi^{2} b^{2}\right)}
\end{aligned}
$$

## 2/8 Relative Motion (Translating Axes)

- It is not always possible or convenient, however, to use a fi xed set of axes to describe or to measure motion.
- In addition, there are many engineering problems for which the analysis of motion is simplified by using measurements made with respect to a moving reference system.
$\square$ These measurements, when combined with the absolute motion of the moving coordinate system, enable us to determine the absolute motion in question.
$\square$ This approach is called a relative-motion analysis.

دانشكده مهنـدسى مكانيك - درس ديناميك

## 2/8 Relative Motion (Translating Axes)

## Choice of Coordinate System

* The motion of the moving coordinate system is specified with respect to a fixed coordinate system.

Vector Representation

$$
\begin{array}{ll}
\mathbf{r}_{A}=\mathbf{r}_{B}+\mathbf{r}_{A / B} \\
\dot{\mathbf{r}}_{A}=\dot{\mathbf{r}}_{B}+\dot{\mathbf{r}}_{A / B} \quad \text { or } & \mathbf{v}_{A}=\mathbf{v}_{B}+\mathbf{v}_{A / B} \\
\ddot{\mathbf{r}}_{A}=\ddot{\mathbf{r}}_{B}+\ddot{\mathbf{r}}_{A / B} & \text { or } \\
\mathbf{a}_{A}=\mathbf{a}_{B}+\mathbf{a}_{A / B}
\end{array}
$$

دانشكده مهنـدسى مكانيك - درس ديناميكى

## SAMPLE PROBLEM 2/14

Car $A$ is accelerating in the direction of its motion at the rate of $3 \mathrm{ft} / \mathrm{sec}^{2}$. Car $B$ is rounding a curve of $440-\mathrm{ft}$ radius at a constant speed of $30 \mathrm{mi} / \mathrm{hr}$. Determine the velocity and acceleration which car $B$ appears to have to an observer in car $A$ if car $A$ has reached a speed of $45 \mathrm{mi} / \mathrm{hr}$ for the positions represented.

$$
\begin{aligned}
& \mathbf{v}_{B}=\mathbf{v}_{A}+\mathbf{v}_{B / A} \\
& v_{A}=45 \frac{5280}{60^{2}}=45 \frac{44}{30}=66 \mathrm{ft} / \mathrm{sec} \quad v_{B}=30 \frac{44}{30}=44 \mathrm{ft} / \mathrm{sec} \\
& v_{B / A}=58.2 \mathrm{ft} / \mathrm{sec} \quad \theta=40.9^{\circ} \\
& \mathbf{a}_{B}=\mathbf{a}_{A}+\mathbf{a}_{B / A} \\
& {\left[a_{n}=v^{2} / \rho\right]} \\
& \left(a_{B / A}\right)_{x}=4.4 \cos 30^{\circ}-3=0.810 \mathrm{ft} / \mathrm{sec}^{2} \\
& \left(a_{B / A}\right)_{y}=4.4 \sin 30^{\circ}=2.2 \mathrm{ft} / \mathrm{sec}^{2} \\
& \quad a_{B / A}=\sqrt{(0.810)^{2}+(2.2)^{2}}=2.34 \mathrm{ft} / \mathrm{sec}^{2} \\
& \frac{4.4}{\sin \beta}=\frac{2.34}{\sin 30^{\circ}} \quad \beta=\sin ^{-1}\left(\frac{4.4}{2.34} 0.5\right)=110.2^{\circ}
\end{aligned}
$$

## 2/9 Constrained Motion of Connected Particles

$\square$ Sometimes the motions of particles are interrelated because of the constraints imposed by interconnecting members.

## One Degree of Freedom

One degree of freedom: only one variable, either $x$ or $y$, is needed to specify the positions of all parts of the system.

$$
\begin{array}{rlrlrl}
L & =x+\frac{\pi r_{2}}{2}+2 y+\pi r_{1}+b \\
0 & =\dot{x}+2 \dot{y} & \text { or } & 0 & =v_{A}+2 v_{B} \\
0 & =\ddot{x}+2 \ddot{y} & \text { or } & 0 & =a_{A}+2 a_{B}
\end{array}
$$

دانشكده مهندسى مكانيك - درس ديناميى

## 2/9 Constrained Motion of Connected Particles

Two Degrees of Freedom

$$
\begin{aligned}
& L_{A}=y_{A}+2 y_{D}+\text { constant } \\
